

Snowmelt is over and reservoir inflows have flat-lined. Waiting for next year's precipitation now.

*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

Project Operations

7/30/2021

Delta outflow conditions continue to be balanced with salinity management controlling operations. DWR installed the False River flow barrier, allowings slightly lower outflows that save upstream reservoir storage. Delta inflows remain low, with inflows as needed for outflow and in-Delta use. Upstream storage at Shasta, Folsom and Oroville is falling. Reservoir releases have been at rates just high enough to meet upstream demands and outflow requirements.

Daily Average Flow

As reported on 7/29
