

A small storm expected this week, with high precipitation over northern California, central region and inland to Shasta Lake. Dry conditions prevail with no significant snowpack yet. Cumulative precipitation so far this water year is well above normal for this time of year. Forecasts call for dry conditions through end of November.

*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to

Project Operations

11/19/2021

Delta outflow conditions continue to be balanced with salinity management controlling operations. Delta inflows decreased and SWP exports are greatly reduced from last week. Minor increases in storage at Oroville, Shasta and Folsom Reservoirs, but they are still running below average and other historic dry year levels for this time of year.

Note: Yesterday's X-2 Position is estimated.
