

No precipitation is forecast for California over the next week. Cumulative precipitation for the Northern Sierra remain below average values for this time of year. The snow water content has decreased and is significantly below the average values for this time of year. Actual runoff is lower than the historical average rates, close to conditions experienced in 2020.

*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

6-Day Forecast Precipitation (inches)

Project Operations

5/20/2022

Delta outflow conditions remain 'balanced'. Delta SJR inflow was relatively steady this week with small increase for SAC inflow and outflow. CVP and SWP exports remain similar to last week's amounts. Shasta and Oroville Reservoir storage amounts remain significantly below average levels for this time of year, but are higher than dry conditions experienced in 1977. The storage at Folsom increased from last week, and are above the historic average level.

Note: Yesterday's X-2 Position is estimated.
