

Little precipitation is forecast for Northern California next week. Cumulative precipitation for the Northern Sierra remain below average for this time of year, and at average for the Southern Sierra. The snow water content has is significantly below the average values for this time of year. Actual runoff is lower than the historical average rates, close to conditions experienced in 2020.

*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

Project Operations

Delta outflow conditions remain 'balanced'. Delta SJR inflow was relatively steady this week with small decrease for Sacramento River inflow and Delta outflow. CVP and SWP exports remain the same as last week's amounts. Shasta and Oroville Reservoir storage amounts are still significantly below average levels for this time of year, but are higher than dry conditions experienced in 1977. The storage at Folsom increased from last week, and are above the historic average level.

Note: Yesterday's X-2 Position is estimated.
