

No precipitation is forecast this weekend for California. Cumulative precipitation for the Sierras remain similar to the average for this time of year. Actual runoff is similar to the historical average rates, close to conditions experienced in 2020.

*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

Project Operations

11/18/2022

Delta outflow conditions remain 'balanced'. Delta outflows have decreased as compared to last week, with a reduction in SAC and SJR inflow. CVP export have increased and SWP export have decreased as compared to last week's amounts. Shasta, Folsom and Oroville Reservoir storage amounts are significantly below average levels for this time of year. All storage volumes decreased from last week. Note: Yesterday's X-2 Position is estimated.
