

Some strong storms are forecasted for California though early January. Cumulative precipitation for the Sierras are similar to average value for this time of year. The snow water content is above the average values for this time of year. Actual runoff is similar to the historical average rates, close to conditions experienced in 2020.

\*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

Delta outflow conditions changed to 'excess Delta conditions with restrictions'. Delta outflows, and SAC and SJR inflows have increased as compared to last week. SWP and CVP export are higher than last week's amounts. Salinity conditions in the South Delta improved last week allowing increased SWP and CVP exports. Shasta, Oroville and Folsom Reservoir storage amounts are significantly below average levels for this time of year. All storage volumes increased from last week. Note: Yesterday's X-2 Position is estimated.
