

No precipitation is forecasted for California for the next week. Cumulative precipitation for the Sierras are above average value for this time of year. The snow water content has declined to 0 - 2% of April 1st values. Actual runoff is higher than the historical average rates.

\*Note: Percentages in each plot refers to percent of average for this date. When historic data is unavailable, Snow Water Content Bar plot is not shown. The percent of historic average for each SWC location differs slightly from CDEC's report due to small discrepancies in historical data.

### 6-Day Forecast Precipitation (inches)

# Project Operations

7/21/2023

Delta outflow conditions remain 'balanced', with SWP and CVP reservoir releases matched to meet in-Basin water demands. Delta outflows and inflow remain similar to last week. Salinity conditions in the South Delta remain excellent, with no water quality constraints on exports. Folsom, Oroville and Shasta reservoirs storage amounts are above average levels for this time of year. Upstream storage volumes have decreased from last week with San Luis remaining nearly full.

## Daily Average Flow
